Professional Summary

B.Tech (CSE) graduate with hands-on experience in Java, Advanced Java, Spring Boot, and RESTful APIs, with additional proficiency in the MERN stack (MongoDB, Express.js, React.js, Node.js). Strong foundation in Object-Oriented Programming and Data Structures & Algorithms, with a proven track record of building scalable and efficient web applications.

Technical Skills

Programming Languages: Core Java, JavaScript

Frontend Development: HTML, CSS, React.js, TailwindCSS, Bootstrap

Backend Development: Node.js, Express.js, Advanced Java, Spring Boot, Hibernate

Databases: PostgreSQL, MySQL, MongoDB

Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, REST APIs, Microservices

Tools: Git, GitHub, VS Code, Eclipse, IntelliJ IDEA, Postman, Docker, CI/CD, GitHub Actions

Project Experience

Snip - Smart URL Shortener | [GitHub](#) | [Live](#)

Apr 2026

Java / Spring Boot / Next.js / PostgreSQL / Docker

- Built a full-stack Smart URL Shortener using Spring Boot (Java 17) and Next.js 14 (TypeScript) with PostgreSQL, featuring URL shortening, click tracking, custom short codes, and session-based link management, deployed on Render using Docker.
- Implemented a custom sliding-window rate limiter from scratch using ConcurrentHashMap and Deque, restricting users to 5 requests per minute per IP with HTTP 429 responses, and ensured concurrency safety using PostgreSQL UNIQUE constraints with retry logic on collision.
- Wrote 12 unit and integration tests using JUnit 5 and MockMvc covering error cases (400, 404, 429) and rate limiting, with a clean MVC architecture separating Controller, Service, and Repository layers with global exception handling.

Content Broadcasting System | [GitHub](#) | [Live](#)

Apr 2026

Node.js / Express.js / PostgreSQL / JWT

- Built a backend Content Broadcasting System using Node.js, Express.js, and PostgreSQL with JWT authentication, Role-Based Access Control (RBAC), and bcrypt password hashing for secure teacher and principal workflows.
- Implemented a stateless subject-wise content rotation engine using modulo arithmetic to dynamically determine active content per subject, with full approval lifecycle management (pending → approved → rejected).
- Designed RESTful APIs following Controller-Service-Model architecture, with Multer-based file upload validation (JPG PNG/GIF,10MB), rate limiting on the public broadcasting endpoint, and thorough edge case handling throughout.

Expense Tracker App | [GitHub](#)

Jan 2026

Java / Spring Boot / MySQL / JavaScript

- Built a full-stack Expense Tracker web application using Spring Boot, MySQL, and JavaScript with secure user registration and login functionality.
- Designed RESTful APIs for managing income and expense transactions using a clean Controller-Service-Repository architecture with Spring Data JPA (Hibernate).
- Created a responsive frontend to display transaction history and generate dynamic reports for total income, total expenses, and current balance.

Experience

JSPIDER Bangalore Full-Stack Java Development Training

Sept 2025 – Apr 2026

- Strengthened proficiency in Core Java concepts including OOP, Collections, Exception Handling, Multithreading, and Lambda Expressions through structured coursework and practice.
- Applied Advanced Java technologies such as JDBC, J2EE, and Servlets in hands-on, real-world implementations.
- Built backend applications using enterprise frameworks including Spring Boot, Hibernate, and MySQL.

Achievements

- Achieved 5-star rating in C++ and Java on [HackerRank](#).
- Solved 350+ problems on [LeetCode](#), [GeeksForGeeks](#), and [HackerRank](#).
- Won first place in an inter-college football tournament.

Certificates

- [Software Engineering Job Simulation](#) via Forage.
- [Programming in Java](#) by NPTEL.
- [Machine Learning, Data Science & Web Development](#) by IHUB DivyaSampark (DST, IIT Roorkee).

Education

Gaya College of Engineering, Gaya

Bihar, India

B.Tech – Computer Science and Engineering

2021–2025

CGPA: 8.36 / 10
